

KCATCH MEDIA — WEBSITE REFERENCE DOCUMENT

Website animation, interaction, hero and visual-direction references

Purpose: This document consolidates the external website references selected for the KCATCH Media website. Each reference is mapped to the specific interaction, animation or visual direction to be studied and adapted for KCATCH.

01 — Cuberto

Reference URL: <https://cuberto.com/>

Primary focus: Scroll + cursor animation

Implementation direction for KCATCH:

- Use as the primary reference for the overall smooth scrolling experience.
- Study the custom cursor / mouse-follower behaviour and hover interactions.
- Study scroll-triggered transitions, image movement, parallax and reveal animations.
- Adapt the interaction language for KCATCH rather than directly copying the visual design.

Reference note: Cuberto also publishes its Cursor & Magnetic and Jelly Scroll techniques, which reinforce the requested direction.

02 — Caractère Bois

Reference URL: <https://www.caractere-bois.fr/?ref=a1.gallery>

Primary focus: Website launch / loading experience

Implementation direction for KCATCH:

- Use as the reference for the loading screen shown when the website first launches.
- Create a short, intentional preloader that establishes the KCATCH visual identity before the homepage appears.
- The loading transition should feel premium, fast and purposeful rather than like a generic progress bar.
- Transition cleanly from the loader into the hero section.

Reference note: The live site presents a modern, image-led editorial experience built around craft, material and motion.

03 — Deadwater

Reference URL: <https://www.deadwater.fr/en/?ref=a1.gallery>

Primary focus: Hero section + scroll-controlled background video

Implementation direction for KCATCH:

- Use as the main reference for the KCATCH hero-section treatment.
- The hero should feel cinematic and immediately communicate the KCATCH brand.
- Use a full-screen background video behind the hero content.
- The background video should respond to page scroll — effectively scrubbing/advancing with the user's scroll position.

- Typography and calls-to-action should remain readable over the moving video.

Reference note: The intended interaction is a scroll-driven video hero, not simply an autoplay background video.

04 — RocketAir

Reference URL: <https://www.rocketair.com/>

Primary focus: Orbital design language for KCATCH brochure / work presentation

Implementation direction for KCATCH:

- Use RocketAir's Orbital Design concept as the reference for presenting KCATCH's work.
- Explore circular/orbital compositions, connected paths, nodes and movement around a central subject.
- Apply the orbital idea specifically to the work/case-study presentation shown in the KCATCH brochure.
- Keep the execution aligned with KCATCH's existing bold, irreverent visual identity.
- Use the concept as an interaction/layout reference rather than reproducing RocketAir's branding.

Reference note: RocketAir describes Orbital Design as an adaptive approach built around clients, audiences and iterative cycles, with a recurring sun/orbital visual motif.

KCATCH Website — Combined Direction

Important: These websites are reference points for interaction, motion and composition. The KCATCH website should not become a visual copy of any reference site.

Source Links

- Cuberto: <https://cuberto.com/>
- Caractère Bois: <https://www.caractere-bois.fr/?ref=a1.gallery>
- Deadwater: <https://www.deadwater.fr/en/?ref=a1.gallery>
- RocketAir: <https://www.rocketair.com/>

Area	KCATCH Direction
Loading	Premium launch/preloader inspired by Caractère Bois.
Hero	Cinematic full-screen hero with a scroll-controlled background video, inspired by Deadwater.
Cursor	Custom magnetic / responsive cursor and hover behaviour inspired by Cuberto.
Scrolling	Smooth, layered scroll transitions, reveals, parallax and movement inspired by Cuberto.
Work / Brochure	Orbital/circular presentation system inspired by RocketAir's Orbital Design.
Overall principle	References should guide interaction and experience design while the final execution remains distinctly KCATCH.

05 — Aurey Sample

Reference URL: <https://aurey-sample.vercel.app/>

Primary focus: Section structure, visual storytelling and project placement immediately after the hero.

Reference direction for KCATCH

- Use the Aurey website as a reference for how a highly visual, editorial website moves from its opening hero into a large visual storytelling section.
- The supplied screenshots show a large-format composition using oversized typography, product imagery, layered cards, soft transparency and generous negative space.
- Use the same principle of making the visual content feel like a presentation rather than a conventional grid of website cards.
- For KCATCH, translate this into a bold creative-agency treatment using the existing KCATCH visual language: deep navy, yellow, black/white, checker/racing motifs and oversized typography.

Required KCATCH page order

Page position	KCATCH treatment
01. Front Hero	The first screen: strongest brand statement, cinematic motion/video and primary interaction.
02. Projects / Work	Projects must appear immediately after the front hero. This becomes the first major content section rather than placing an About/Services section before the work.
03. Project storytelling	Use large visual case-study presentations, inspired by Aurey's ingredient/storytelling treatment, to move users through selected KCATCH work.
04. Services / Capability	Introduce what KCATCH does after users have already seen proof of the work.
05. About / Brand	Company story, positioning and personality.
06. Contact / CTA	Strong final conversion section.

Aurey reference — opening / Ingredient Universe composition

Aurey reference — large visual + overlapping information panel

How to adapt this to KCATCH

- After the hero ends, transition directly into the first featured KCATCH project.
- Use a large project visual that can occupy most of the viewport, with typography and supporting information layered over or beside it.
- Projects can transition horizontally, vertically or through scroll-driven scenes; the exact motion should remain consistent with the Cuberto-style smooth scrolling reference.
- Keep the project section visually immersive so the user's first impression after the hero is the quality of KCATCH's work.

Reference website note: The Aurey sample explicitly presents its 'Ingredient Universe' as a scroll-based storytelling experience and then continues into its collection and ritual sections. For KCATCH, the key structural takeaway is to bring the equivalent of the project/work showcase immediately after the front hero. ■cite■turn0search0■

Updated KCATCH Website Direction

Area	KCATCH Direction
Loading	Premium launch/preloader inspired by Caractère Bois.
Hero	Cinematic full-screen hero with a scroll-controlled background video, inspired by Deadwater.
Projects — immediately after Hero	The first major section after the front hero must showcase KCATCH projects/work. Use immersive case-study compositions and scroll-driven transitions.
Cursor	Custom magnetic/responsive cursor and hover behaviour inspired by Cuberto.
Scrolling	Smooth, layered scroll transitions, reveals, parallax and movement inspired by Cuberto.
Project presentation	Use Aurey's editorial storytelling approach for large visuals, typography, overlays and sequential project narratives.
Work / Brochure	Orbital/circular presentation system inspired by RocketAir's Orbital Design.
Overall principle	Use the references as interaction and composition guides while keeping the final execution distinctly KCATCH.
